Apply filters to SQL queries

Project description

My organization wants to secure the system even more. As a security analyst, I need to keep the system safer. The steps below show the SQL statements I used to filter out information for security related tasks.

Retrieve after hours failed login attempts

MariaDB [or	ganization]	> SELECT * F	ROM log_in_at	tempts WHI	ERE login_time > '	'18:00' AND
event_id	+ username	 login_date	+ login_time 	country	+ ip_address 	success
2	apatel	2022-05-10	20:27:27	CAN	192.168.205.12	. 0

A potential security incident happened after 6:00 p.m. So, failed login attempts after 6:00 p.m. needed to be investigated. The code above was used to select the failed login attempts that occurred after 6:00 pm or 18:00 and display it.

Retrieve login attempts on specific dates

```
MariaDB [organization] > SELECT *
                                           ->
  -> FROM log_in_attempts
   -> WHERE login_date = '2022-05-09' OR login_date = '2022-05-08';
event id | username | login date | login time | country | ip address
                                                                             success
       1

                                                 US
```

We suspect that the event happened on 2022-05-09. So, we need to investigate the login attempts on that day and the day before. The code above was used to select all login attempts on both days by using OR statement.

Retrieve login attempts outside of Mexico

```
MariaDB [organization] > SELECT *
   -> FROM log_in_attempts
   -> WHERE NOT country LIKE 'MEX%';
event_id | username | login_date | login_time | country | ip_address
                                                                            success

Then, we believe that the login attempts occurred outside of Mexico. So, need to investigate login attempts outside Mexico by using the command above. WHERE NOT is used to exclude Mexico. MEX% is used because it is represented as MEXICO and also MEX.

Retrieve employees in Marketing

```
MariaDB [organization] > SELECT *
   -> FROM employees
   -> WHERE department = 'Marketing' AND office LIKE 'East%';

```

The team also wants to make security updates for employees except for the Information Technology department. So, I used WHERE NOT to exclude employees in the Information Technology department.

Summary

I make filters to the SQL queries to retrieve specific information on the login attempts made. Two different tables was used which are log_in_attempts and employees. Operators such as AND, OR and NOT are used to filter the information needed. LIKE as well as % also used to search patterns
